### **DETAILED ACTION**

1. This Office Action follows a response filed on September 2, 2010. Claims 22 and 31 have been amended; no claims have been cancelled or added.
2. In view of the amendment(s) and remarks the rejection of claims 22, 24-35 and 37-41 under 35 U.S.C. 103(a) as being unpatentable over Martin et al. (U. S. Patent Application Publication 2003/0191231, now U. S. Patent 7,022,759) in view of Belmont (U. S. Patent 5,672,198) has been withdrawn.
3. Claims 22, 24-35 and 37-41 are pending.

### ***Allowable Subject Matter***

4. Claims 22, 24-35 and 37-41 are allowed.
5. The following is a statement of reasons for the indication of allowable subject matter: the present claims are allowable over the closest reference: Martin et al. (U. S. Patent Application Publication 2003/0191231, now U. S. Patent 7,022,759).

Martin discloses aqueous ambient temperature crosslinkable and shelf stable polyester polymer compositions, which provide coatings having improved open and wet edge times as well as good tack-free times (page 1, [0001]).

Martin discloses that the crosslinkable polyester oligomer(s) preferably contains a sufficient concentration of bound hydrophilic water-dispersing groups capable of rendering the oligomer self water-dispersible, but the concentration of such groups is preferably not so great that the oligomer has an unacceptably high water solubility in order to not compromise the water sensitivity of the final coating. The type of hydrophilic

Art Unit: 1762

groups capable of rendering the crosslinkable polyester oligomer(s) water-dispersible is well known in the art, and can be ionic water-dispersing groups or non-ionic water-dispersing groups. Preferred non-ionic water-dispersing groups are polyalkylene oxide groups, more preferably polyethylene oxide groups. A small segment of the polyethylene oxide group can be replaced by propylene oxide segment(s) and/or butylene oxide segment(s), however the polyethylene oxide group should still contain ethylene oxide as a major component (page 4, [0062]-[0063]). There are many examples of carboxylic acids (or their ester forming derivatives) which can be used in polyester oligomer(s) synthesis for the provision of the monomer(s) providing an acid component. Examples include, but are not limited to monofunctional acids such as (alkylated) benzoic acid and hexanoic acid; and C<sub>4</sub> to C<sub>20</sub> aliphatic, alicyclic and aromatic dicarboxylic acids (or higher functionality acids) or their ester-forming derivatives (such as anhydrides, acid chlorides, or lower alkyl esters) (page 6, [0073]).

However, Martin et al. et al. do not disclose or fairly suggest the claimed pigment composition comprising a) at least one pigment, and b) at least one dispersant composition comprising i) at least one nonionic surfactant which is insoluble in water and ii) at least one polymer comprising at least one salt of a carboxylic acid group which is soluble in water, particularly wherein the non-ionic surfactant is a polyalkylene oxide that is greater than 90% capped and has a molecular weight between about 2500 and 10000, and wherein the pigment is a modified carbon product comprising a carbon product having attached at least one organic group, as per newly amended claim 22.

Art Unit: 1762

6. As of the date of this Notice of Allowability, the Examiner has not located or identified any reference that can be used singularly or in combination with another reference including Martin et al. to render the present invention anticipated or obvious to one of ordinary skill in the art.

7. In the light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delay, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reason for Allowance".

### ***Conclusion***
